

COMPRECOVER

Zero-Balance Accounts

Accurate valuation of Workers' Compensation AR balances has become a growing problem for hospitals. With the right team, \$0 balance Work Comp accounts can quickly translate into a revenue stream. CompRecover is a **multi-year review** of all zero balance workers' compensation claims. Underpayments are identified by our proprietary software, Enforcer, and our revenue specialist team who appeal your claims for correct payment and collection.

EnableComp provides clients with **data reports** summarizing the results of our collection efforts, including a "root cause" analysis identifying the reason for underpayments for hospital process improvements.

Our reports include identification of payers and their **underpayment summaries** to illustrate payer payment accuracy.

"0" balance recovery is a verified and proven process to appeal underpayments to receive the payments you are entitled to receive. It is a form of "found money".

workers' compensation revenue solutions

*Who wouldn't want to do this?
I had nothing to lose and
everything to gain.
Even if we had the people
who could manage it,
EnableComp would still find more.
They are the experts. It's that simple.*
